Git
Docker

I am a final-year student of Software and Information Technology at the Faculty of Technical Sciences in Novi Sad. I am passionate about exploring new technologies and software development, as well as continuous learning and professional growth. My goal is to contribute to innovative projects and work on solutions with real-world applications. My experience in various fields has helped me develop adaptability, analytical thinking, and problem-solving skills, which I consider essential for my further professional development. I am eager to apply my knowledge and skills in a challenging and dynamic work environment.

Notable projects

Project Management Platform
Developed a scalable project management platform using a microservices architecture in a 4-member team. The platform allows users to manage projects and tasks, with roles such as Project Manager and Member. Key features include user authentication, task status management, notifications, workflow management, and project analytics.
Tech Stack: Angular, Go, Docker, MongoDB, Cassandra, REST APIs, JWT

Tourist Agency Web MVC Application Developed a web-based MVC application for tourist agency, supporting both registered and unregistered users. Registered use include customers and managers. The application allows users to search, book, an manage travel packages, including features such as user registration, login, profi management, and role-based access. Managers can add, update, and manage trav packages, while customers can make reservations and view discounts. The platform a supports personalized travel requests and dynamic offers based on seasonality. **Tec Stack:** Java, Spring MVC, Thymeleaf, Hibernate, MySQL, HTML, CSS, JavaScript
